

TEXT

HIGHLIGHTER **PRO**

12 STYLES

SCALABLE SHAPES

PHOTOSHOP CC

A Great Big Thank You!

Thank you for your purchase! Here's how to get started:

Photoshop CC:

1. Doubleclick on the Text Highlighter by SparkleStock.atn file.
2. Go to the Actions panel (Window > Actions).
3. Select the "Play All Effects" action then click on the play button on the bottom of the Actions panel.
4. If you see the "No Pixels are selected" Error?" error message, checkmark the "Never Show Again" option. The actions use this to detect your text height.
5. After the action is done processing, all the effects will be prerendered as snapshots in your History panel (Window > History). Click on any of the snapshot to apply the effect.

Video Demo:

Tips:

- The actions are only compatible with Photoshop CC.
- The "Fluid Width" action works best with capitalized text and without any punctuation marks.
- The "Fluid Width (Small Text)" may produce better results for text smaller than 50 pixels high.
- For faster playback, ensure that the actions are collapsed (not showing the steps). You can also switch to button mode by going to the Actions panel menu (Top-Right of the panel) and selecting Button Mode.
- The "Pill" action does not create a vector shape. It creates a high-res Smart Object. This is because Photoshop does not do a good job converting round shapes into vector paths. The Smart Object can be scaled up to 4x its size.
- You can type extra spaces to to manipulate the shape of the text. For example, typing extra spaces before and after a line of text will create wider highlights. You can also add spaces above and below your text. However, this may interfere with the "Fluid Width" actions.
- To create spacing above and below the "Fluid Width" highlight, go to the Characters panel (Window > Character) and set the Leading to around 2x the font size. The Leading setting is beside the Text Size setting.
