

How to import Presets in Adobe Lightroom (for MAC and Windows)

1. Open Lightroom and click **Lightroom** then **Preferences** on a Mac. On a PC, open Lightroom and click on **Edit** at the top.
2. Go to **Preferences** and click it
3. The window that pulls up will show 6 different tabs. Click on **Presets** and open the box called **Show Lightroom Presets Folder...**
4. A new window pulls up. Double click on **Lightroom** then double click on **Develop Presets**
5. Copy the content of the unzipped files you just downloaded into the folder **Develop Presets**. That's it. Restart Lightroom and the alwiDesign Presets are available. Enjoy!

- Always backup your downloads!
