

Overlays + Actions

1. To get started, install action "Overlay Action.atn"
(Just Drag-and-drop it in Photoshop)
2. Open any color photo.
3. Run an action (Window > Actions > Play)
4. Following the instructions in the action place and scaled textures in the photo if you need to rotate it.
5. If you don't want to use vignetting and matte effects, just make the appropriate layers invisible.
6. You can also use several overlay textures on photo. Place the texture over the photo and set the overlay mode: for Dust and Scratch the screen, and for Paper and Canvas multiply.
