

## Colorized BW Old Photo Effect

1. Open Adobe Photoshop.
2. Install the 'Colorized Old Photo.atn'  
(Window > Actions > Load Actions)
3. Open photo.
4. Play 'Make Old BW' to turn your image in an vintage BW style.
5. Play 'Add All Tones' to add all the colors from the photo. To reduce saturation make less Opacity layer.
6. To add each color separately, run the corresponding action. If the colors are too many, then do less opacity layer. If color is too low, then duplicate this layer.
7. To add a custom color (eyes, for example), run the action 'Custom Colorization'. Then choose regular round brush with soft edges, adjust the color, transparency, and colorize.
8. Play 'Add Warm Photo Filter' actions to obtain the yellowish hue of old photographs. Don't add it if you're going to use mockup, because it already has the yellow paper and the photo is multiplied by it.
9. When your photo is ready you can present it using one of the two mockups — Landscape or Portrait orientation. Merge all the layers, open the file 'Vintage Postcard Mockup.psd', then double click smart layer 'Your Photo', paste your design and close with save.

Thanks for the purchase!
