

CYANOTYPE Digital Photoshop Effect

WATCH THE DEMO VIDEO

1. For a start, open the _Cyanotype Photo Template.psd in Photoshop. Open the smart layer "REPLACE PHOTO" and place or insert a photo image, then save and close it.
2. Try turning off the "Less Brightness" layer if the photo looks too transparent. There is also a "Duplicate Shift" layer that simulates some blurring when the negative is shifted.
3. Then select one of the matching blue backgrounds from the Backgrounds layer group. A total of 14 varieties.
4. You can add one of the three frames from the Grunge Frames layer group to simulate the aged edge of the negative. In the layer group "Paper Textures" there are 5 types of old paper overlays.
5. To create a Cyanotype design for a contour print, like objects or plants, open the _Cyanotype Graphic Template.psd
6. Open the smart layer "REPLACE PHOTO" and place or paste the image, adjust the levels so that the background turns white, and the objects are almost black, then save and close it.
7. To make objects sharper, turn off the "Blur Gallery" in the effects of the "REPLACE PHOTO" layer. You can transform or rotate the "Duplicate Shift" layer or lower its opacity if it distorts the outlines of objects too much.
8. Choose a suitable background and paper. Enjoy cyanotype design made in minutes!
