

Version 1.0.0

The panel works on InDesign, Photoshop and Illustrator CC 2019.

It allows you to load scripts in both .jsx and jsxbin formats via multiple selection.

Each Adobe application has its own specific list of scripts.

Through the EDIT button it is possible:

- rename the label associated with the script
- change the position of the script in the list
- delete the script from the list (not the source file)
