

# Convology XT

## Installation Instructions

Once you have paid for your product, an email will be sent from Adobe, containing both the serial number(s) and the download links with the instructions that you find below.

**Important** – You must download a free copy of the Convology XT plugin for any library purchase. You may download here <https://impulserecord.com/cvxt-download/>

For windows users, click the link with the .exe file and follow the dialogue box. For Mac users, click the .dmg file and follow the prompts. Note that the Convology XT plugin will be installed on your local C drive, but any library content you purchased, may be installed on a drive of your choice, including external drives.

Following the steps below will properly load Convology XT and any library content correctly onto your system. (All of the following information will be contained in the download file that comes from Adobe)

**Step 1:** Find your operating system, Windows or Mac, below. Copy the download link into your browser and download.

**Step 2:** Run the installers and accept default options. The library installers give you the option to install on an external drive if desired.

**Step 3:** Launch your DAW and open an instance of Convology XT, found under “Impulse Record” manufacturer, “Reverb” category, VST2 or VST3 Folder.

**Troubleshoot:** If you are not able to see the "Convology XT" extension in Audition, go to the Effects menu, select "Audio Plug-in Manager...", and in the new Plug-in Manager window click "Scan for Plug-ins", then select "Convology XT" and click OK.

When the plug-in is first opened it will popup a warning that it has not been registered. Click “Register” and then enter your serial, name, and email address, taking care to enter your email address correctly. You can also register later by selecting the Register option in the setting menu (gear icon). You will be prompted to register any sections of the library that you purchased as well.
