

CineTakes Adobe Premiere Plugin

The CineTakes Adobe Premiere Plugin facilitates the synchronization of the recorded take metadata on a compatible ARRI camera with Adobe Premiere. This is possible by using CineGizmo Cloud, CineTakes iOS mobile application and of course the Adobe CineTakes Plugin.

While using the CineTakes app on set, one can rate/vote takes, make notes, create markers and even record voice markers. All of this information will be synchronized with our cloud and becomes accessible in the user's web account and in our CineTakes Adobe Premiere Plugin

Installation

Use the package manager on mac or the setup file on Windows

Usage

In Premiere Pro click on Window > Extensions > Cinegizmo.

Use your CineGizmo account with paid CineTakes Adobe Premiere Plugin membership to login and authorize the plugin.

Add your video files, select your project from CineTakes Panel and the takes will synchronize with the files

Filter takes, view notes, view markers or listen to audio markers.

Compatibility

CineTakes Plugin is compatible with Adobe Premiere CC

For CineTakes Plugin you need a valid CineGizmo account. You also need to use CineTakes iOS mobile application, which is compatible with ARRI Alexa Mini, ARRI Alexa Mini LF, and AMIRA.
