

Function Overview

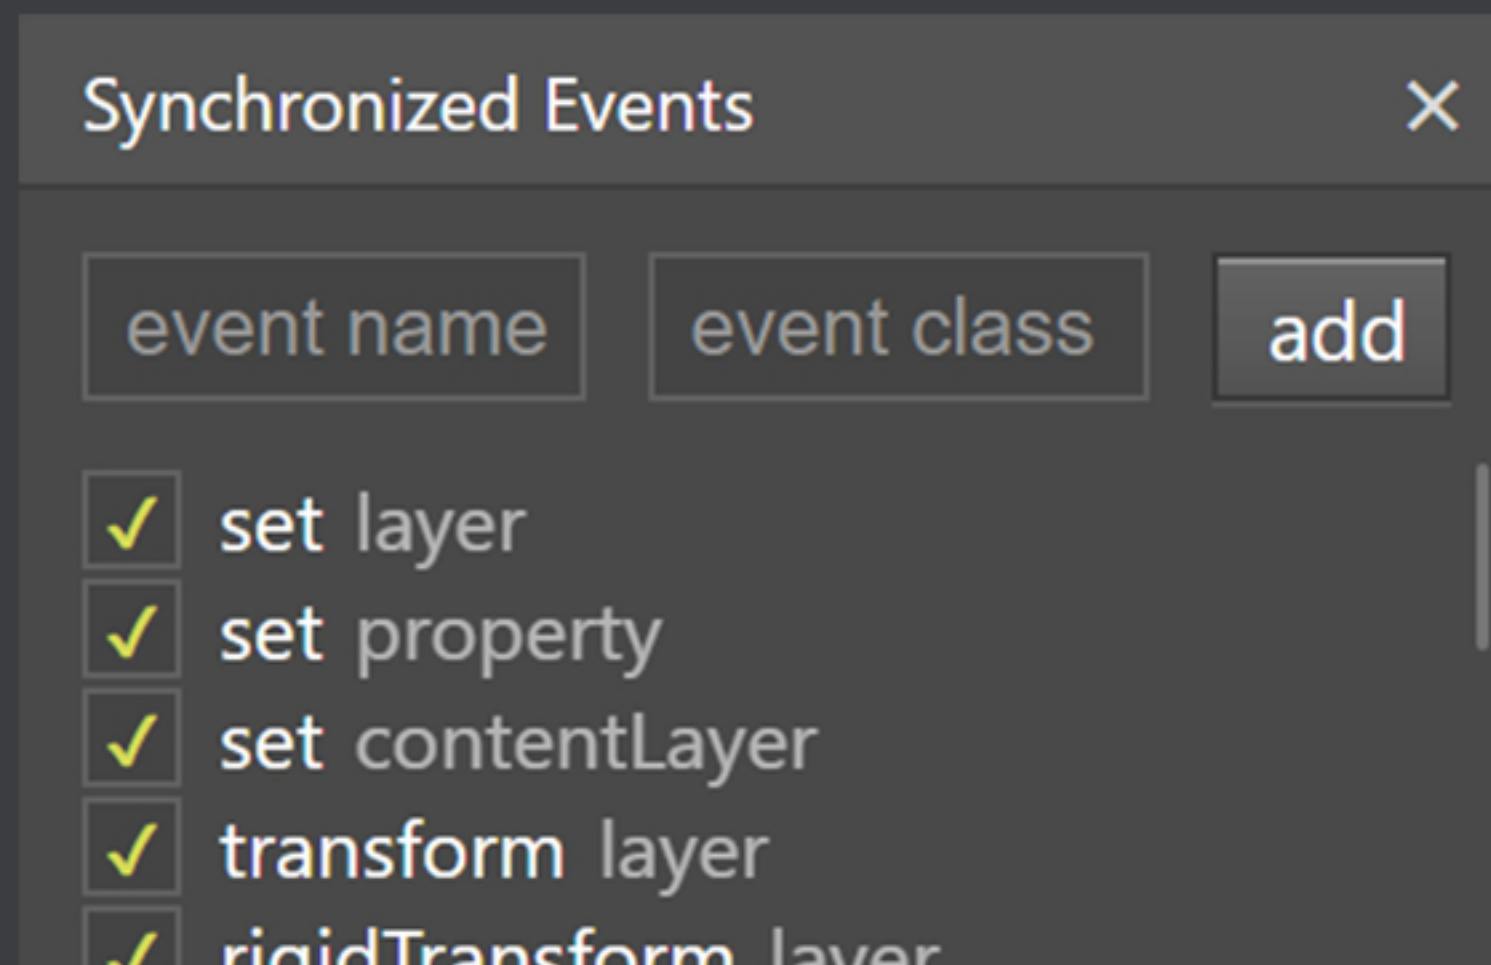

List of Sync Groups

All changes you do to a layer of a sync group will be synchronized with the other layers. Double click the group name to edit it. Click the arrow to expand or collapse the group. (Alt+Click for all). Delete layers or a whole group by clicking the „X“.

Tool Bar

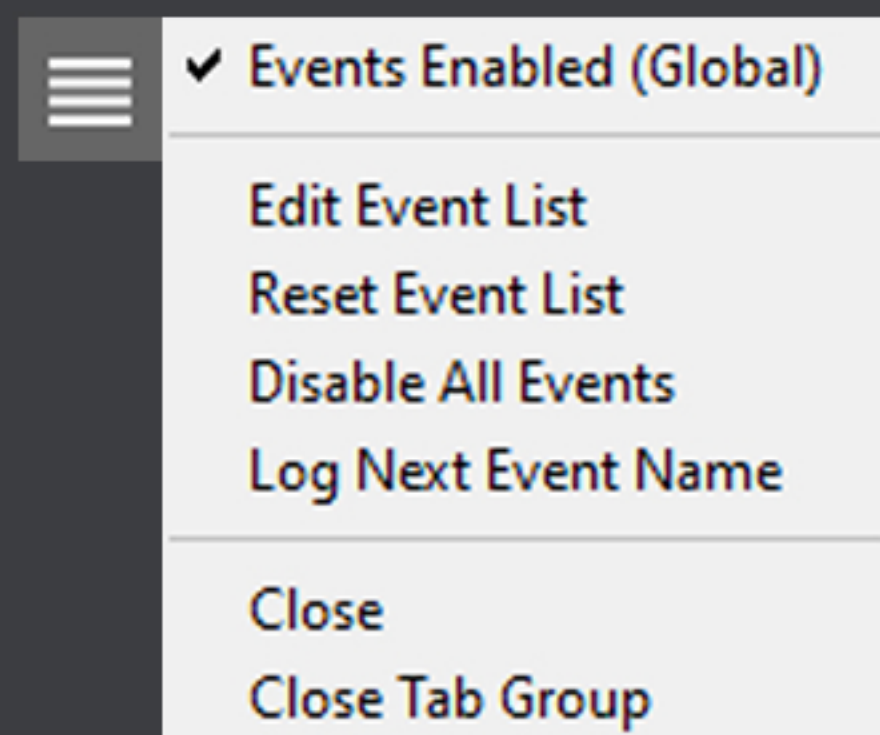

- ▲ Import selected layers to active Sync Group
- +
- ↔ Set Sync Groups based on groups in the document
- 💧 Set Sync Groups based on layer label colors
- 📁 Create new Sync Group
- 🗑 Delete active Sync Group

Synchronized Events Screen

Enable or disable each event individually. You can also add events the panel should listen for (for example of future Photoshop updates)

Use the „Log Next Event Name“ functionality from the menu to find out the event name.

Panel Menu

You can turn off event listening globally or disable and reset the events that the panel listens for.

The „Edit Event List“ entry opens the events screen explained above. If you want to add new events and don't know the Photoshop internal name, activate logging and then do anything in Photoshop.
