# Exporter 1.0 Guide
©2020 Oussama Touzni

Introduction

In this document I'm going to guide you through the installation process of Exporter 1.0, then I'll explain the basic configuration of the plugin and how to get the most of it!

How to install:

Download the ZXP file and use ZXPInstaller (https://zxpinstaller.com/) or Anastasiy's Extension Manager (https://install.anastasiy.com/) and follow the instructions to install the plugin.

If for any reason the installation fails, you can change the extension of the downloaded archive to zip and extract it to one of the following folders:

For Windows users:
Win(x86): *C:\Program Files\Common Files\Adobe\CEP\extensions*

Win(x64): *C:\Program Files (x86)\Common Files\Adobe\CEP\extensions, and C:\Program Files\Common Files\Adobe\CEP\extensions*

For Mac users:

/Library/Application Support/Adobe/CEP/extensions

After installing the extension, please follow these steps:

Know your CEP supported version:

Application	2017 Version	2018 Version	2019 Version	CC 2020 Version
Adobe InDesign	12 (CEP 7)	13 (CEP 8)	14 (CEP 9)	15 (CEP 9)

For windows users:

Download the corresponding file to your installed product
https://drive.google.com/open?id=1QVSX_AMOku9f-9d_TSC118V5q5jqAZTI

For example, if you're using Adobe InDesign 2018, download Debug Mode ON CEP 8.reg and execute it and that should be all!
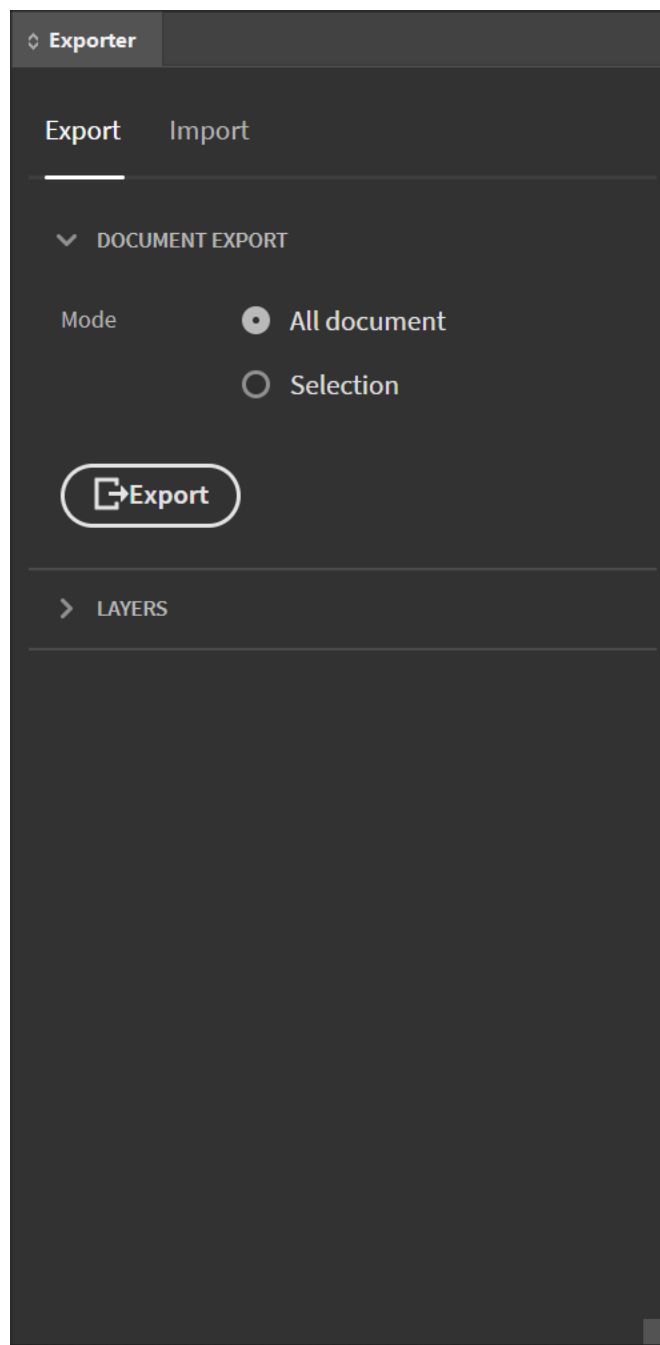

For Mac users:
Execute one of the following commands depending on your CEP version:

| Version	command
CEP 7	defaults write com.adobe.CSXS.7 PlayerDebugMode 1
CEP 8	defaults write com.adobe.CSXS.8 PlayerDebugMode 1
CEP 9	defaults write com.adobe.CSXS.9 PlayerDebugMode 1

If you followed everything and still can't get Exporter to work , don't hesitate to contact me on ''oussama.touzni@gmail.com" or contact@it-tun.com and specify "Exporter Support" as subject so I can get back to you as soon as possible.
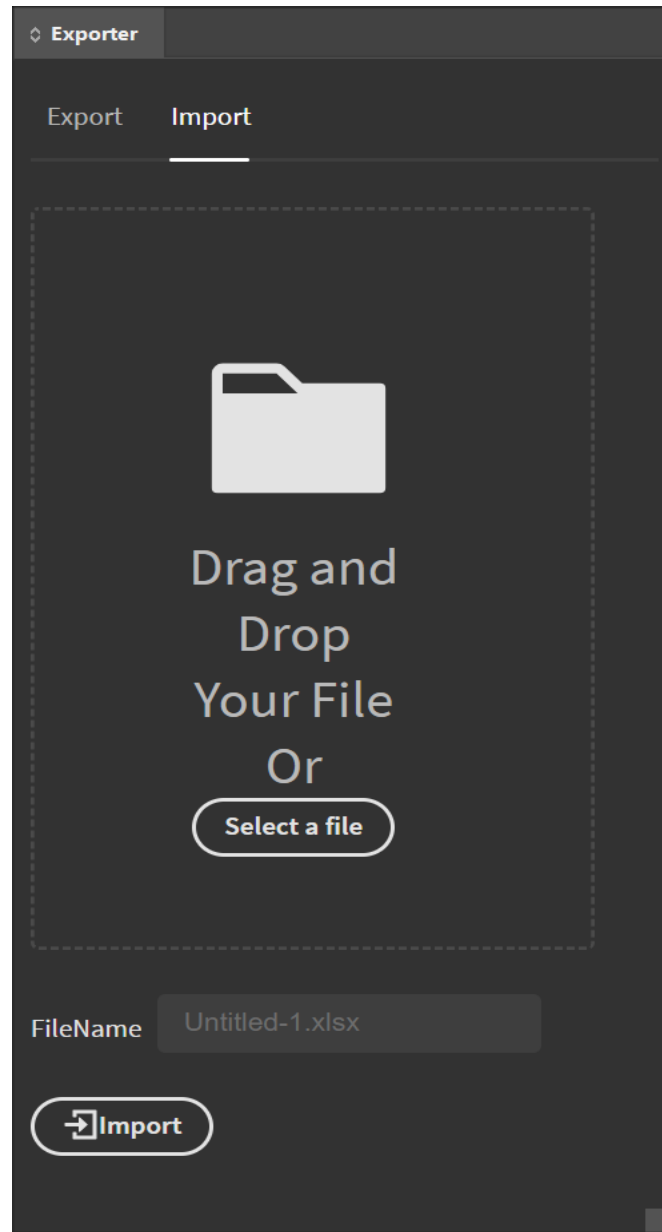

Document / Selection export

With Exporter you can extract all the texts in the document or within the selected frames to an excel file ready for your translator to work on. (frame id , original text , translated text)

Layers' export

You have multiple text layers in your document, and you want to translate only some of them? Exporter will make this easier for you, you can select which layers needs to be translated and click export , Exporter will extract all the texts present in these layers and generate an excel file ready for your translator.

Import translations

You exported your texts, and your translator finished his work, now it's time to apply the translations!
Simply drag and drop the file and let Exporter do this in an intelligent way, if you are importing a file
generated with the document/selection feature translations will be applied directly. If you import a file
generated with layer's export, the plugin will create a new layer with the translated texts for each layer
selected during export, amazing isn't it!

Still need some help. Watch this video
