

# BANNERIUM

...by designers, to designers ❤️

## Welcome in Bannerium

### FEW TIPS ON HOW TO USE THE PLUGIN:

Here are some best practices which will make you more productive using Bannerium

**1. Start with the biggest banner format**

Because all other banners are created from this format, it means that the quality of the components will preserve

**2. Name layer which should cover whole formats as “background”**

if there are more layers - put them in one group named “background”

**3. Everything in group will be generated as Smart Object and will keep the correct layout of the group**

**4. You need to start generating documents. It is now working with artboards**

**5. One layer in the document has to be selected**

## That's it.

I will be more than happy to hear your feedback. Only based on your feedback I can improve the plugin.

Feel free to contact me at any time.

Bannerium is my ❤️ and I want to make it perfect for you.
