- Visit my website:

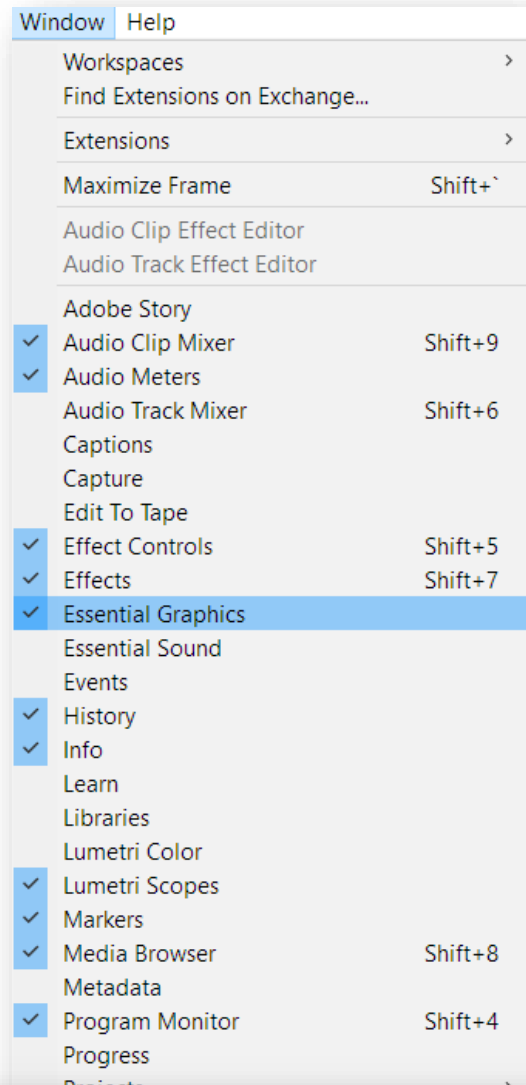

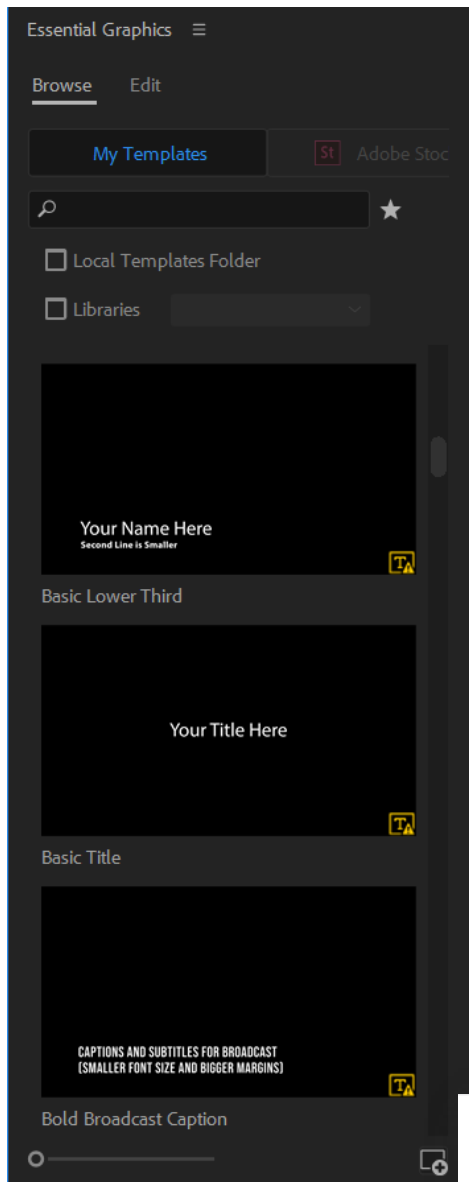

<https://alexilchenko.blogspot.com>

1) Open Adobe Premiere Pro and select "Graphics" workspace layout.

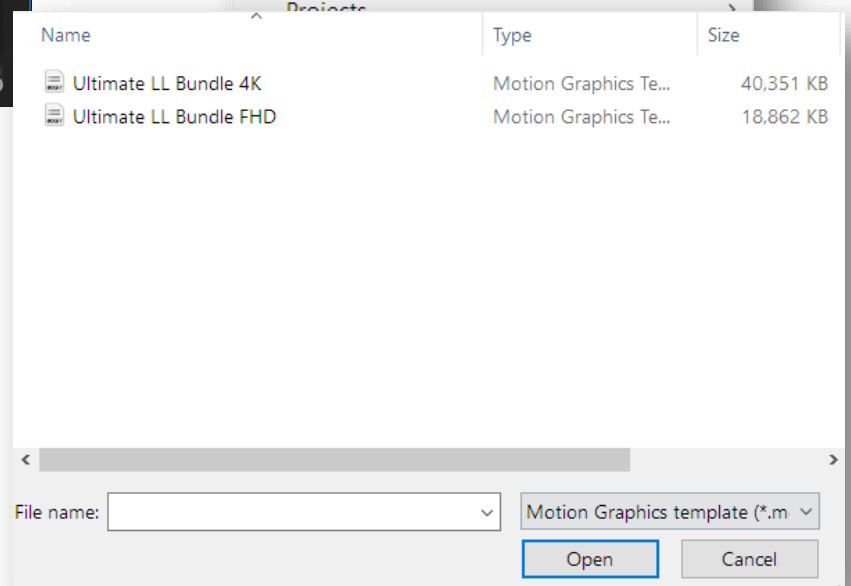

2) Find “Essential Graphics” Panel, if no go to “Window” menu and enable “Essential Graphics”.

On this panel in right bottom corner find icon  and click it to import Ultimate LL Bundle.

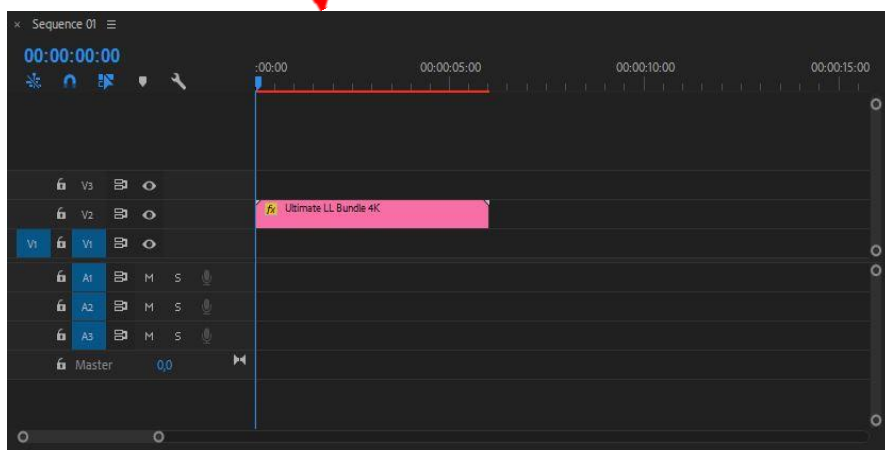

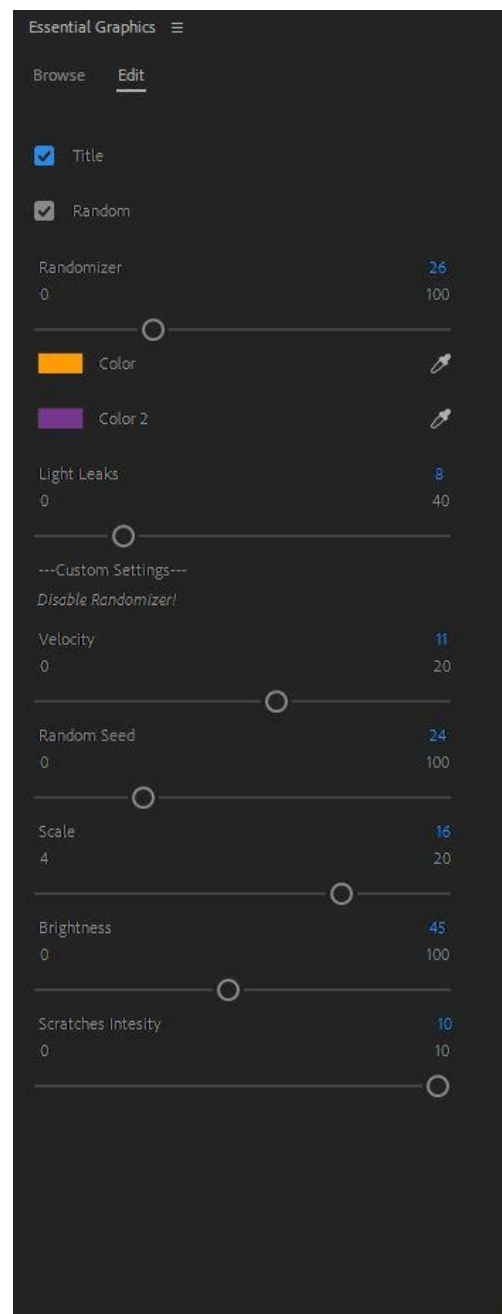

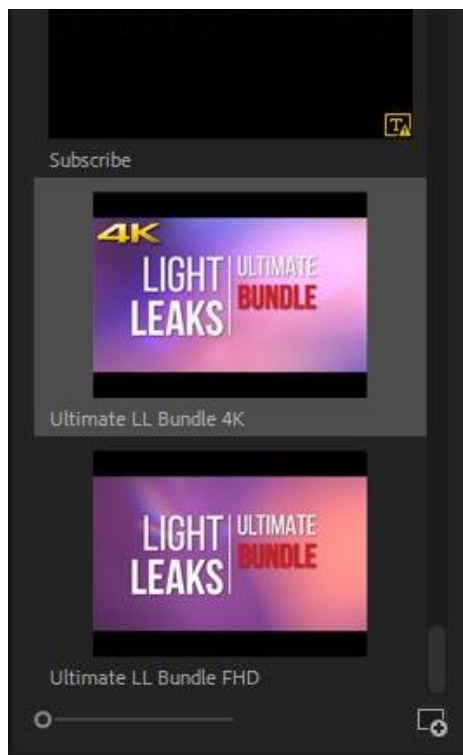

Name	Type	Size
 Ultimate LL Bundle 4K	Motion Graphics Te...	40,351 KB
 Ultimate LL Bundle FHD	Motion Graphics Te...	18,862 KB

3) Find path folder to Ultimate LL Bundle in Import Window and open it.

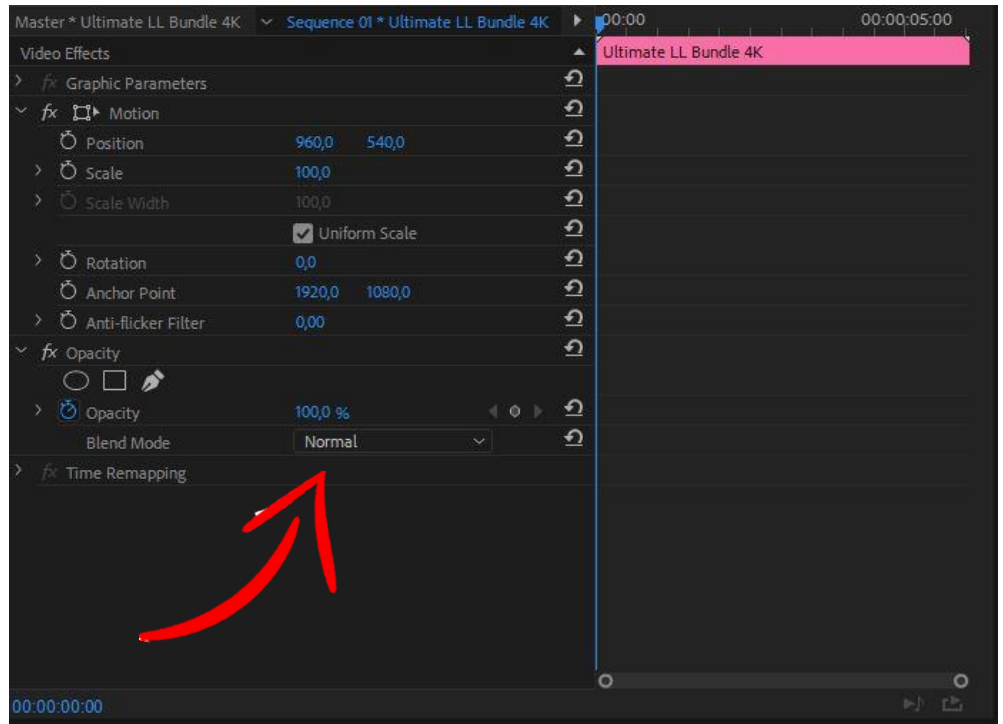

- 4) Drag and drop appropriate resolution graphic library bundle on your Sequence. Click on it on timeline panel and keep it active to get settings panel.

- 5) Generally you have 3 graphic elements to customize: Light Leaks, Scratches and Film Burn. Play around the settings to design your own Light Effect style with randomizer or do it manually with setting below. You have to disable Randomizer when you want to customize Light Effect manually.

- 6) Set blending mode to “Screen” or “Lighten” to overlay your footages that are under Ultimate Light Leaks Bundle layer.

Note! Custom Settings don't work while Randomizer is on. But you can still modify Scratches Intensity and Random Seed under Randomize mode.

- 7)

Enjoy your use ;)
