

CONV FREE INSTALLATION AND USER GUIDE FOR WINDOWS

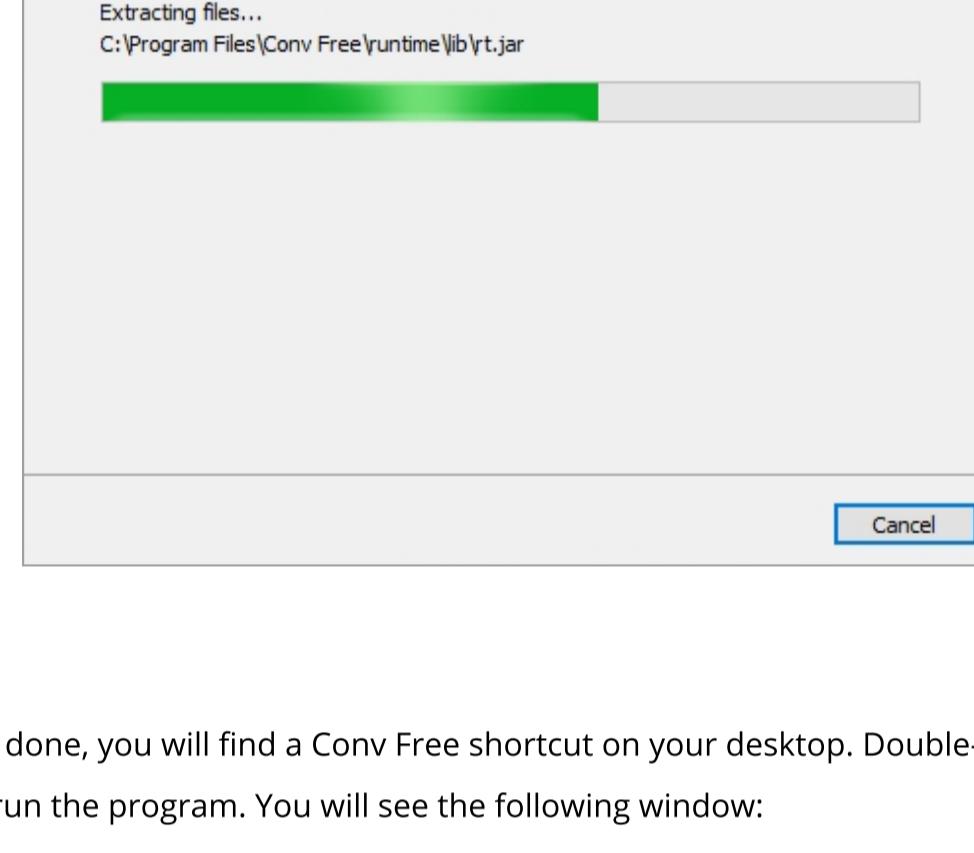

How to install

Hello! Thank you for choosing Conv PRO!

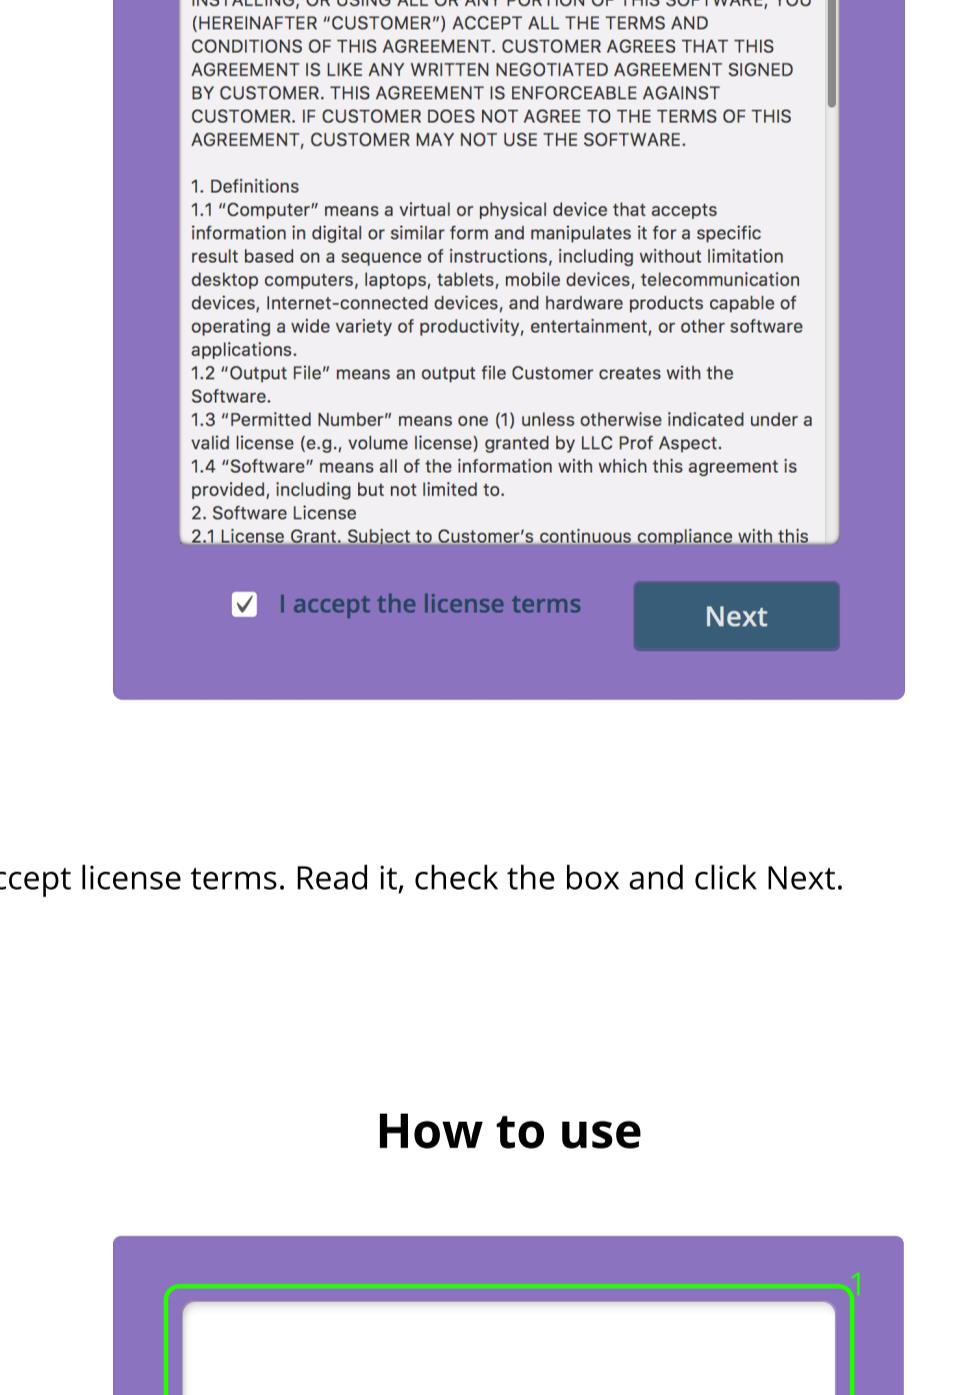

Double click on Conv Free-Installer.exe. The installer will start. You will see a similar system window. Click Yes in it.

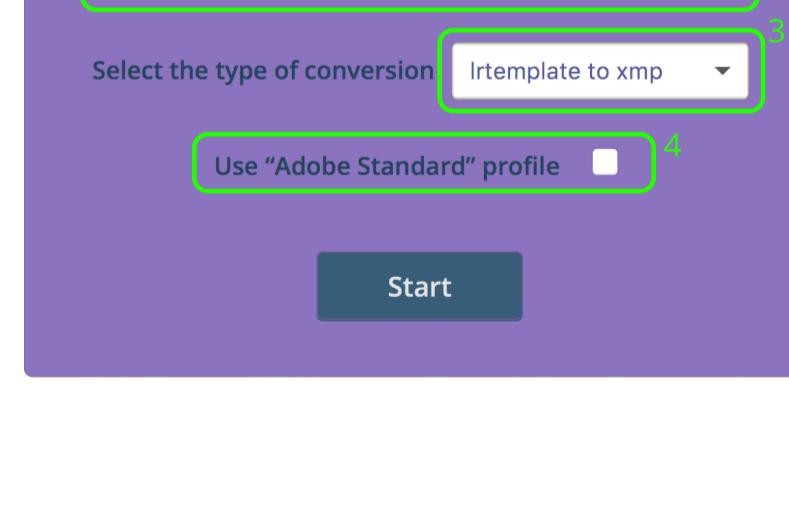

Then click the Install button

The installation should go pretty quickly:

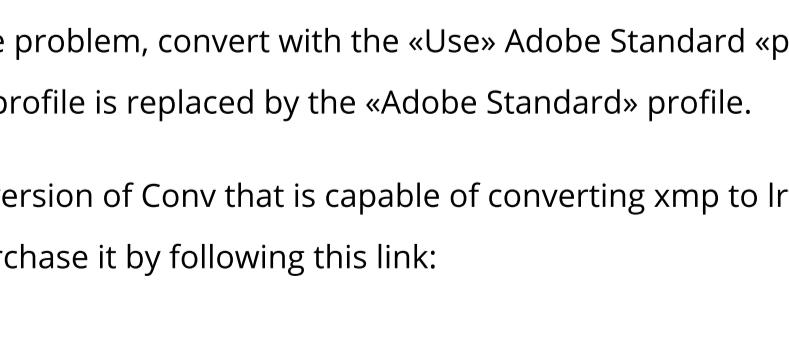

When installation is done, you will find a Conv Free shortcut on your desktop. Double-click it with the left mouse button and run the program. You will see the following window:

Then you need to accept license terms. Read it, check the box and click Next.

Done!

How to use

1. Drop-area. You can drop individual files, groups of files and folders containing files here. But attention should be paid to the following: if you drop a folder, the program does not enter the sub-folder, and takes files only from the root of the folder.

2. Here you must select the folder into which the program will upload the converted files.

3. The type of conversion is shown here. If you open this drop-down list, you will see what types of conversions are available in the PRO version. Inside this list there is a button, by clicking which you can always expand your FREE version to the PRO one.

4. Your Lightroom may have a camera profile with a name that is not recognized by older versions of Lightroom. To solve the problem, convert with the «Use» Adobe Standard «profile» checkbox. In this case, the built-in camera profile is replaced by the «Adobe Standard» profile.

If you want an extended version of Conv that is capable of converting xmp to Irtemplate and dng to Irtemplate, you can purchase it by following this link:
