

# TOP ▶ TRANSITIONS

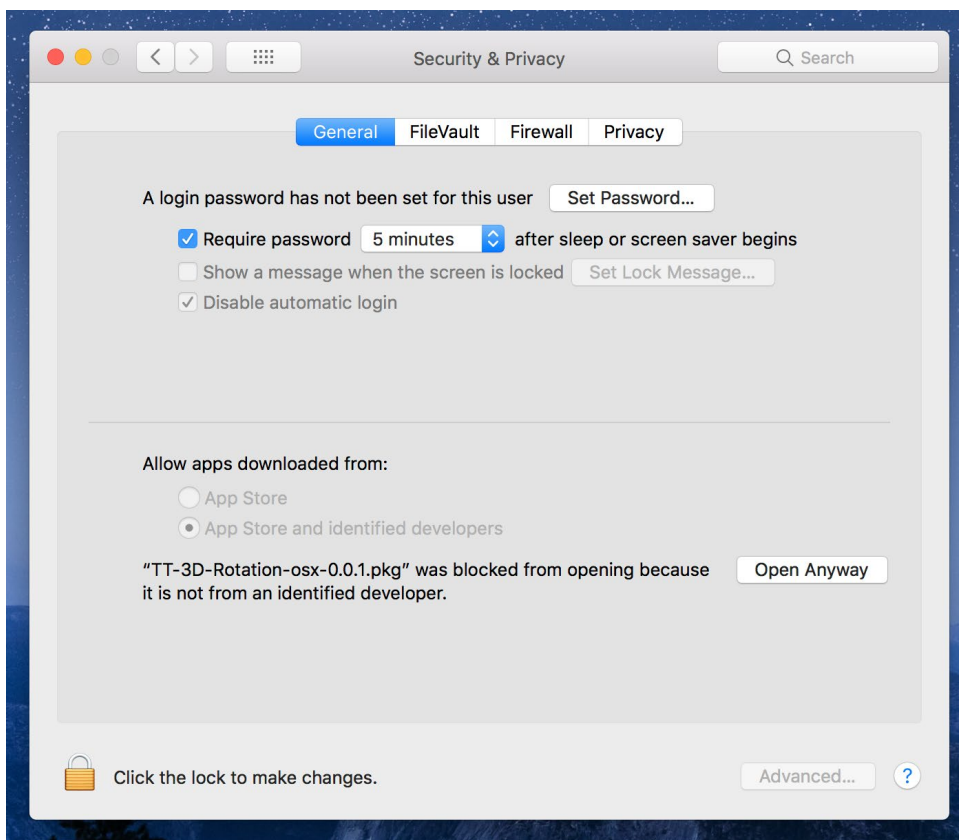

1. Unzip the product ZIP file.
2. Run the installation pkg file.
3. In the window that appears, click OK .

4. Open System Preferences, and then go to Security & Privacy.

5. In Security & Privacy, click on the Open Anyway button. If your password is required, enter to allow the system to install our application.

6. Then run the installation pkg file again, and if this window appears, select "Open".
- Click "Continue" on the next screen.
6. Complete the installation and click "Close".
7. Restart Adobe Premiere Pro.
8. Open Effects > Video Transitions > TT 'Plugin Name'
9. Just drag-n-drop the selected transition to the timeline between clips.
10. You can choose one of the transitions that is more suitable (for example, the direction of movement of the camera).
11. Thank you!
