

The Bannernow Photoshop Export extension can be installed directly from Adobe Creative Cloud Extensions marketplace or by downloading the [bannernow.zxp](#) file and installing it using [Anastasiy extension manager](#)

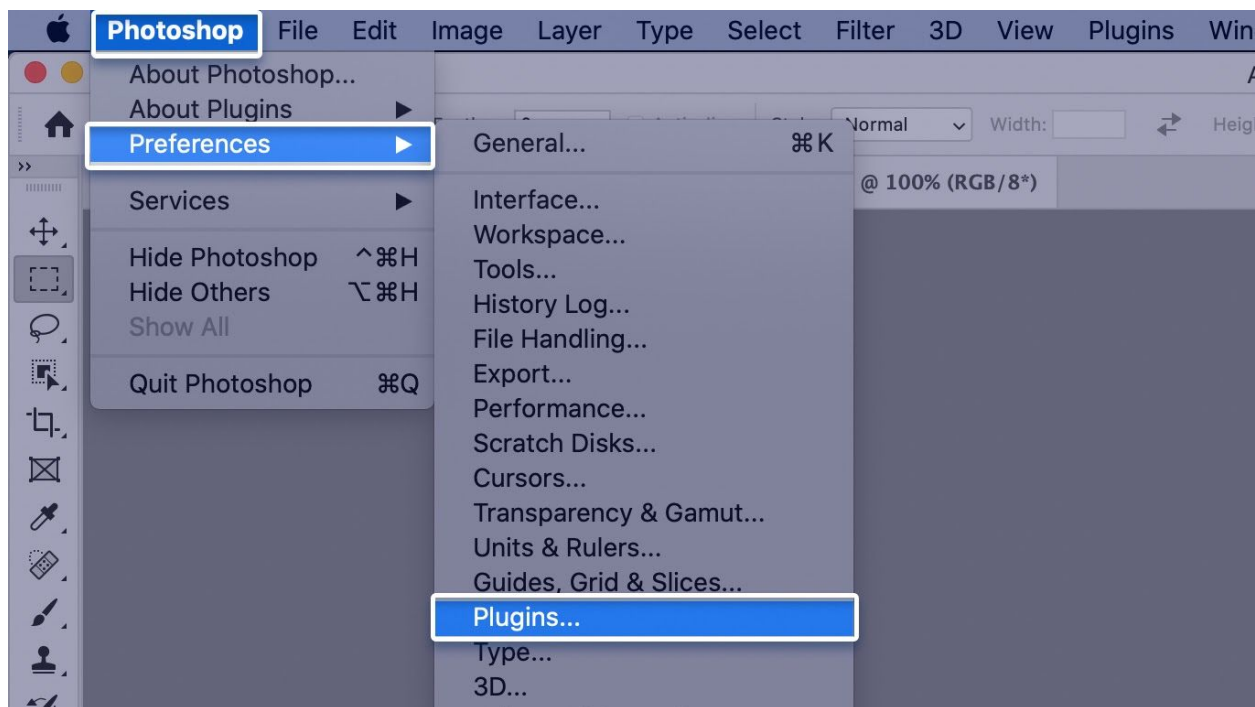

Once Bannernow extension is installed you can find it in **Window -> Extensions (Legacy) -> Bannernow**

If you will see a message “**Could not communicate with the generator**” this means that you will need to enable Photoshop native generator first.

Open Photoshop **Preferences** -> **Plugins...**

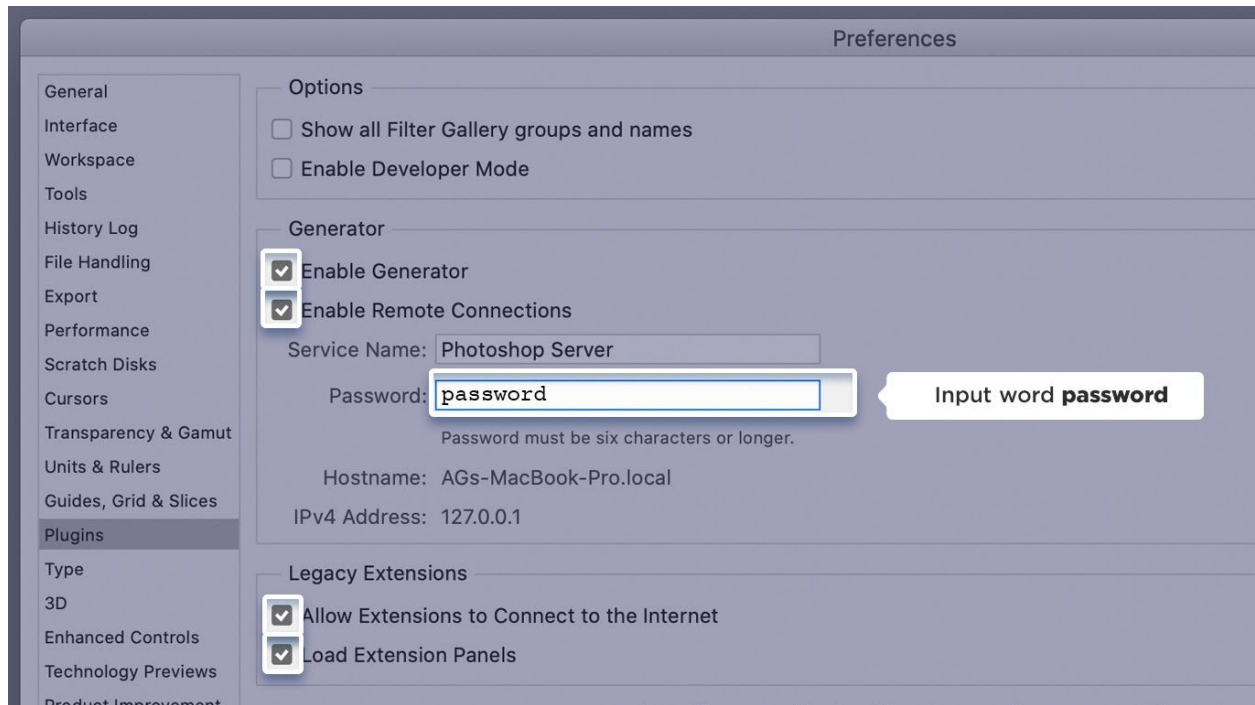

Enable Generator

Enable Remote Connections

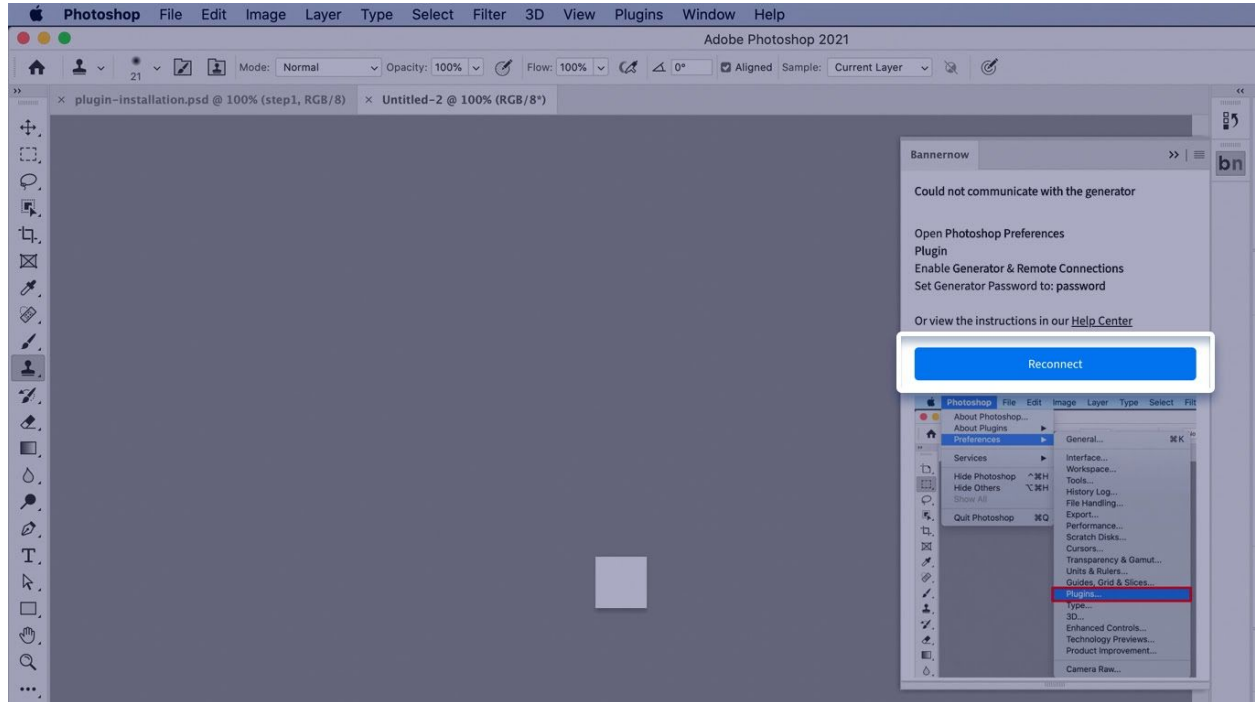

Set Password to **password**

Enable Allow Extensions to Connect to the Internet

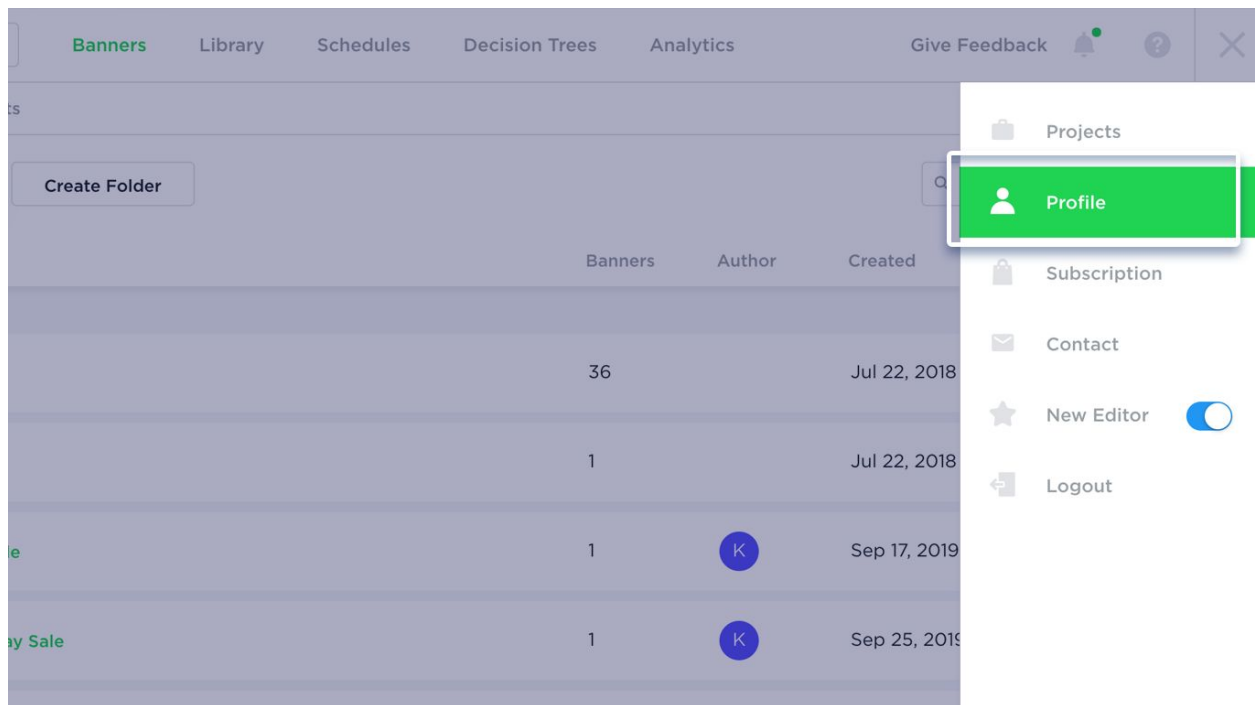

Enable Load Extension Panels

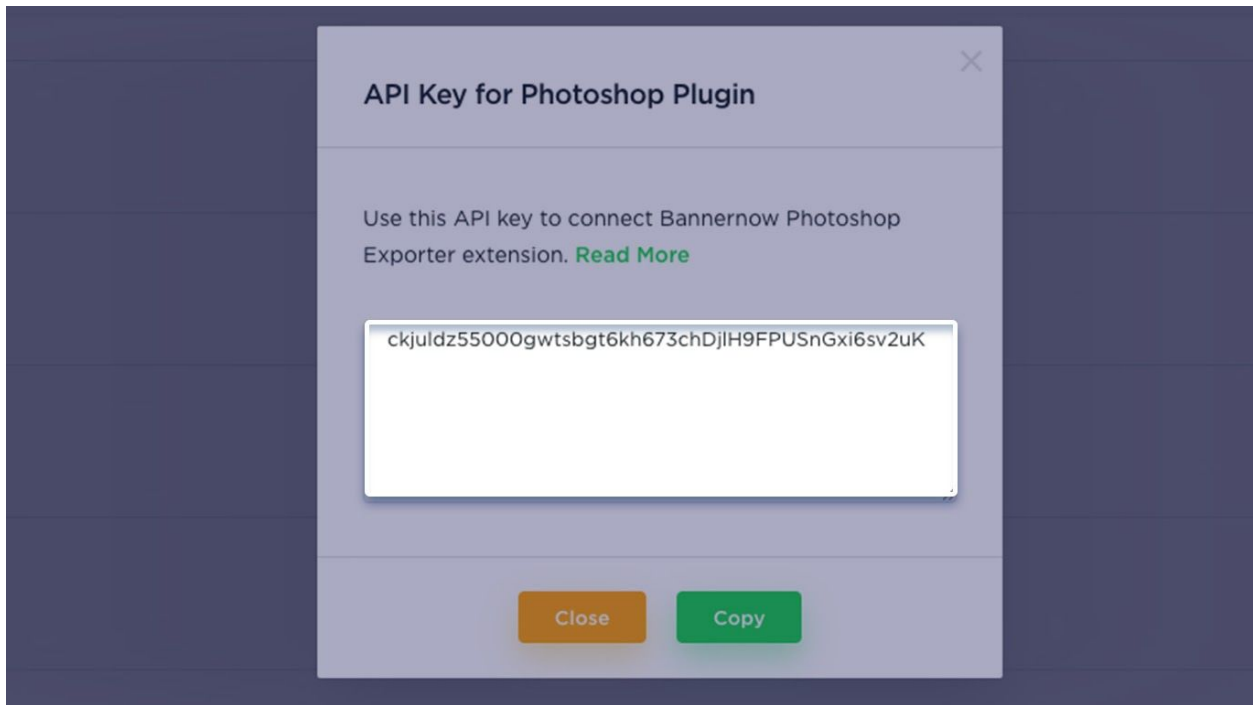

Apply changes and click **Reconnect** button:

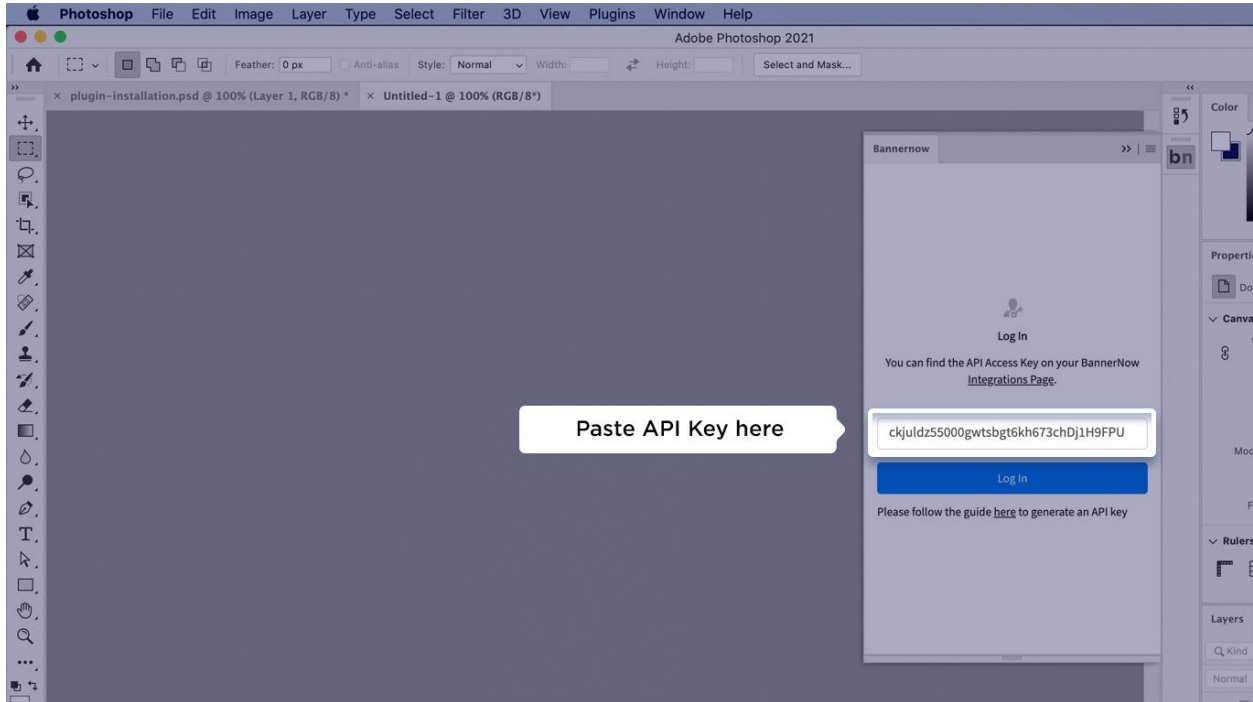

Now we need to generate the API key that will be used to connect our extension to your Bannernow account. Go to Bannernow **dashboard** -> **Profile** -> **Integrations** (<https://bannernow.com/profile/integrations/>)

Click **Connect Photoshop Plugin** and copy the API key

Paste it in Photoshop Bannernow Exporter Extension

Now you should be able to export your designs from Photoshop directly to Bannernow.
