

Complete Brushes Bundle - Lr and ACR Presets Pro

This collection for Lightroom Classic were made by professional photographers to offer you the best quality. With these brushes tools you can add a professional look to your photographs in an instant and save a lot of time in post-production.

With the Local Adjustments Brushes you can make fine adjustments by changing only the specific parameter without altering the selected preset. The 60 brushes that can only be used with Lightroom Classic CC allow you to work locally on the photograph without altering the presets.

You will be able to make specific changes even only on a specific area of the photo. As each photo is unique, you can intervene in a targeted way to improve only specific features of an image, such as the eyes in a portrait, to give brightness to the skin of the face or emphasize the sunset in a landscape: in few words, fine-tune your photo.

At any time in an instant you can return to the original picture without wasting time in uploading it again.
