

You do not need to install anything.

Create a Color Lookup layer in Photoshop. You can do that from the bottom bar of the Layers panel, or from the Adjustments panel above the Layers panel.

Click the icon on the new layer and the Color Lookup panel will appear. Click the drop-down menu that says Load 3DLUT... and you will see a list of LUTs that are already installed. To load one of your new LUTs, click the Load 3DLUT... item.
